- Transparency is part of being an ethical researcher.
- Scientific values espoused by Robert Merton (Merton 1942):
 - Universalism: anyone can make a claim regardless of status.
 - Communism: open sharing of knowledge.
 - Disinterestedness: truth as motivation, not financial gains (COI).
 - Organized skepticism: peer review, replication.

Ethical Research

- Fraud exists (Simonsohn 2013), but mostly we should admit that we're human, subject to bias and motivated reasoning, transparency can help with this (Nosek, Spies, Motyl 2012).
- Those of us who run experiments or use data with personal identifying information should take IRBs seriously as part of transparency (Ch. 11–13 Morton & Williams 2010, Desposato 2014).

Why we worry:

- (Anderson, Martinson, De Vries 2007)
- (John, Loewenstein, Prelec 2011)

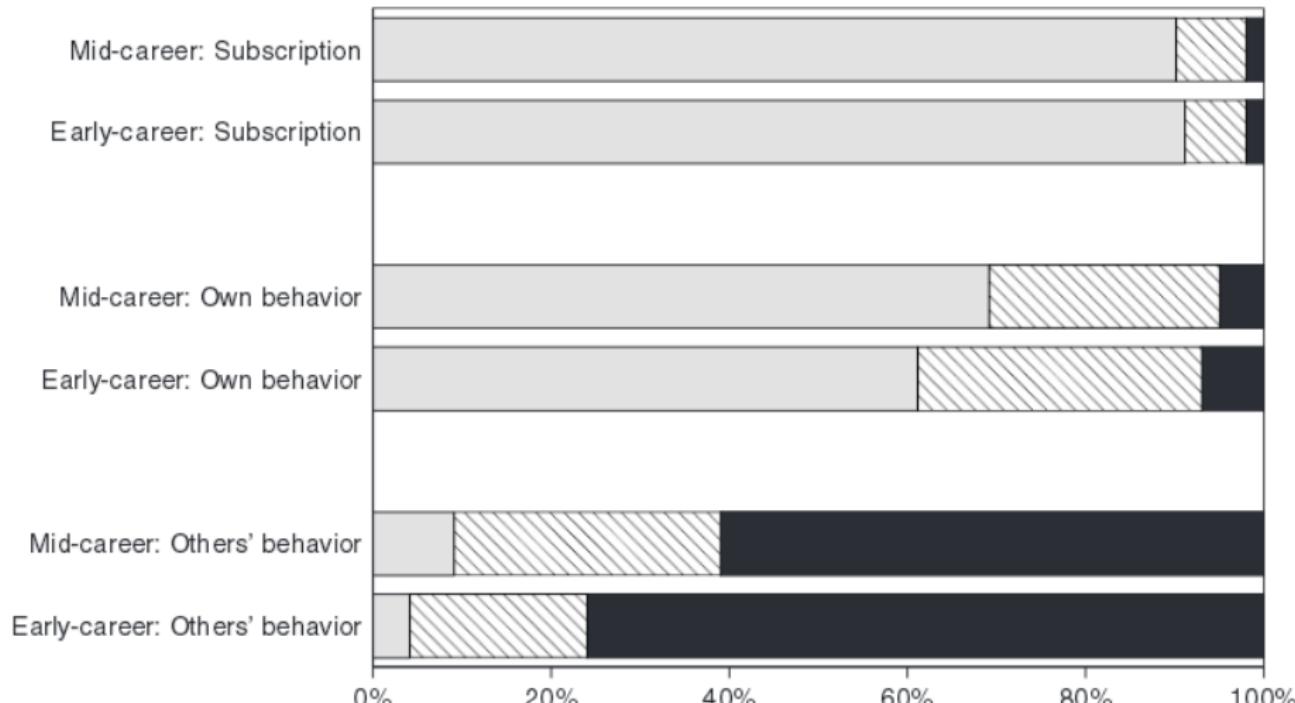

FIG. 3. Norm versus Counternorm Scores: Percent with Norm > Counternorm (dotted), Norm = Counternorm (striped), Norm < Counternorm (solid).

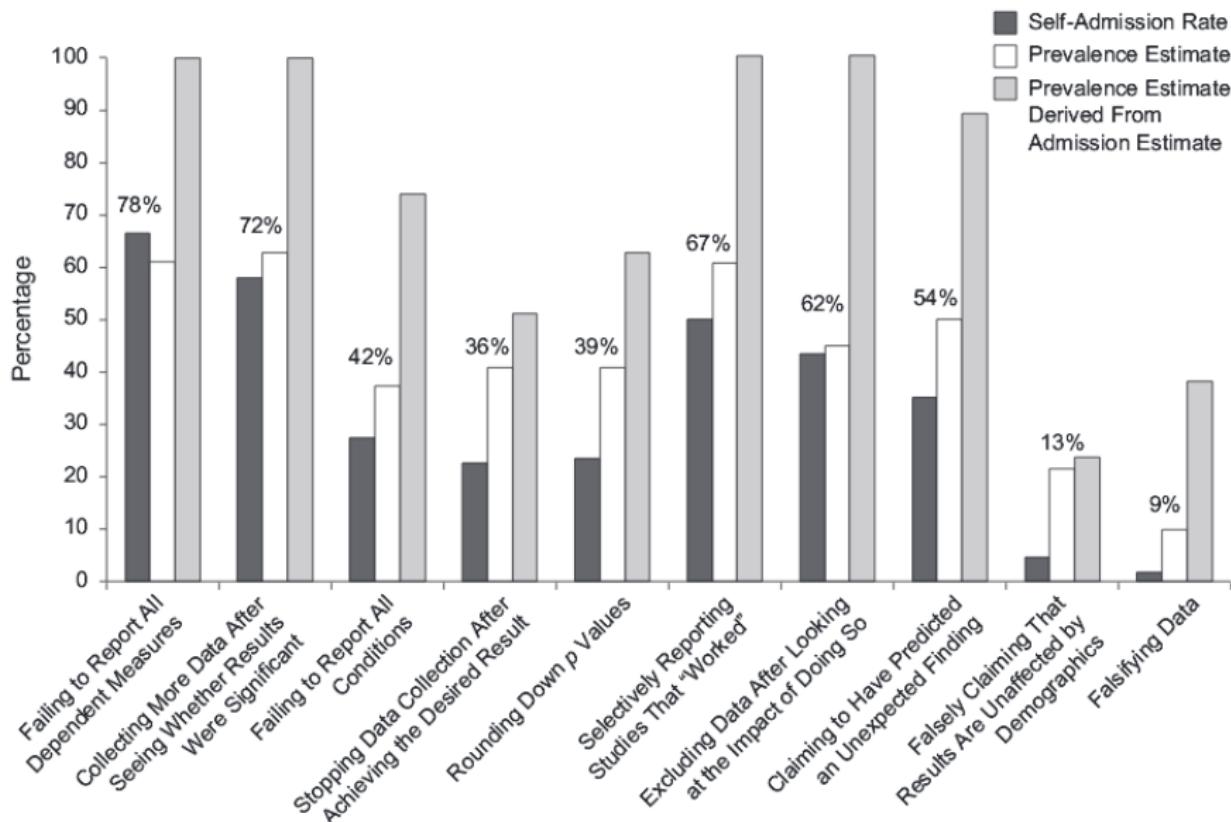

Fig. 1. Results of the Bayesian-truth-serum condition in the main study. For each of the 10 items, the graph shows the self-admission rate, prevalence estimate, prevalence estimate derived from the admission estimate (i.e., self-admission rate/admission estimate), and geometric mean of these three percentages (numbers above the bars). See Table I for the complete text of the items.

Publication Bias

Existence of the problem:

- Effect sizes diminish with sample size (Gerber, Green, Nickerson 2001)
- There is a higher fraction of rejected hypothesis tests in social compared to hard sciences (Fanelli 2010).
- Published null results are disappearing over time, in all disciplines (Fanelli 2011).
- Data on the complete set of experiments run shows strong results are 40pp more likely to be published, and 60pp more likely to be written up. The file drawer problem is large. (Franco, Malhotra, Simonovits 2014)

If we only write up/publish significant results, and we have no record of all the insignificant results, we have no way to tell if our ‘significant’ results are real, or if they’re the 5% we should expect due to noise.

Registration

Registration as Solution to Publication Bias:

- Publicly stating all research you will do, what hypotheses you will test, prospectively.
- Near universal adoption in medical RCTs. Top journals (ICMJE) won't publish if it's not registered.
<http://clinicaltrials.gov>
- Even better if registry requires outcomes from after study. Currently limited, but NIH is moving on this.

Design-Based Publication

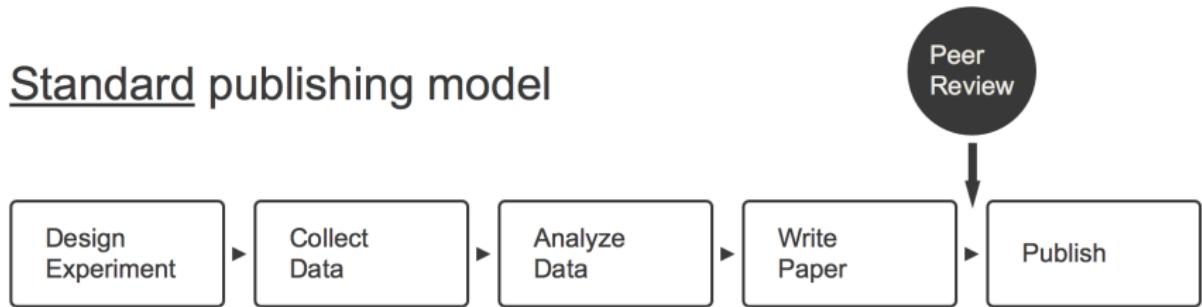

AKA Registered Reports, moves peer review before data gathering, results, and analysis.

- 1 Design a project
- 2 Submit
- 3 Reviewed based on importance of question and quality of design
- 4 Get in-principle acceptance
- 5 Follow through, and nulls get published

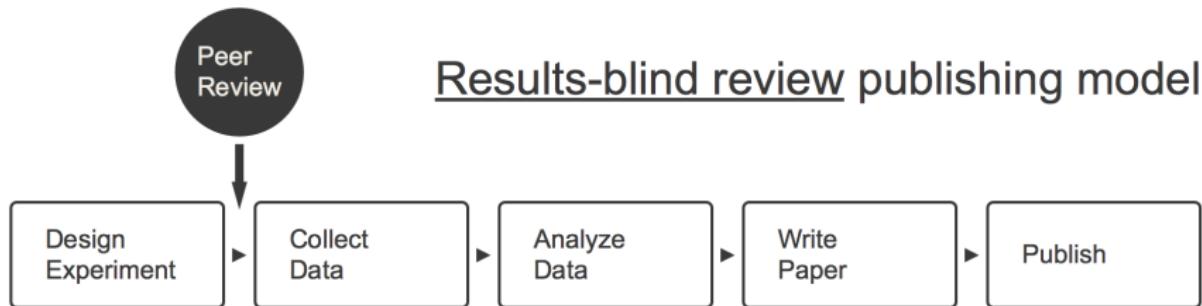

20 Journals, 5 more with Special Issues

Define the problem:

- Also called fishing, researcher degrees of freedom, or data-mining.
- Definition: flexibility in data analysis allows portrayal of *anything* as below an arbitrary p-value threshold; significance loses its meaning.
- Not something only evil people do. It's subconscious, or simply built into statistics (Gelman, Loken 2013).

Pre-Analysis Plan

Explain the solution:

- From 3ie: “A pre-analysis plan is a detailed description of the analysis to be conducted that is written in advance of seeing the data on impacts of the program being evaluated. It may specify hypotheses to be tested, variable construction, equations to be estimated, controls to be used, and other aspects of the analysis. A key function of the pre-analysis plan is to increase transparency in the research. By setting out the details in advance of what will be done and before knowing the results, the plan guards against data mining and specification searching. Researchers are encouraged to develop and upload such a plan with their study registration, but it is not required for registration.”

- Debated in public health/epidemiology.
- Difficult, but not impossible, to verifiably pre-specify.
- Example: Government data releases
- Example: Minimum Wage (Neumark 2001)
- Example: US, Italian Elections

The Employment Effects of Minimum Wages: Evidence from a Prespecified Research Design

DAVID NEUMARK*

This article presents evidence on the employment effects of recent minimum wage increases from a prespecified research design that entailed committing to a detailed set of statistical analyses prior to “going to” the data. The limited data to which the prespecified research design can be applied may preclude finding many significant effects. Nonetheless, the evidence is most consistent with disemployment effects of minimum wages for younger, less-skilled workers.

Replication in Empirical Economics: The *Journal of Money, Credit and Banking* Project

*By WILLIAM G. DEWALD, JERRY G. THURSBY, AND RICHARD G. ANDERSON**

This paper examines the role of replication in empirical economic research. It presents the findings of a two-year study that collected programs and data from authors and attempted to replicate their published results. Our research provides new and important information about the extent and causes of failures to replicate published results in economics. Our findings suggest that inadvertent errors in published empirical articles are a commonplace rather than a rare occurrence.

Lessons

- Using version control (AKA revision control) can help to make your work more reproducible.
- What is version control?

Version control is a system that records changes to a file or set of files over time so that you can recall specific versions later. For the examples in this book you will use software source code as the files being version controlled, though in reality you can do this with nearly any type of file on a computer.

Write your code and your paper in the same file so you won't lose information or make copy and paste mistakes.
Possible in R and Stata.

- Include tables by linking to a file, instead of a static image.
- Include number by linking to a value calculated by an analysis file, instead of a static number typed manually.
- Automatically update tables and numbers.
- Produce entire paper with one or two clicks.

The logo for Jupyter consists of the word "jupyter" in a bold, black, sans-serif font. It is centered within a white circle. Above and below the circle are two thick, orange, curved bands that resemble the top and bottom edges of a smile. Small dark gray circles are positioned at the intersections of these curves with the circle.

Post your code and your data in a trusted public repository.

- Find the appropriate repository:
<http://www.re3data.org/>
- Repositories will last longer than your own website.
- Repositories are more easily searchable by other researchers.
- Repositories will store your data in a non-proprietary format that won't become obsolete.

Lessons

- 1 Publish guidelines on transparency and reproducibility for policy analysis (similar to the TOP, described before).
- 2 Partner with agencies/think tanks interested in implementing this ideas. [Example here.](#)
- 3 Iterate.

Lessons

OK, estoy convencido. Como puedo implementar esto en mi propia investigación?

- Tomen nuestro MOOC (E. Miguel). [▶ Link](#)
- Suscribanse al blog & E-mail de BITSS [▶ Link](#)
- Aplicuen a nuestro Instituto de Verano: RT2. [▶ Link](#)
- Aplicuen a nuestros fondos de investigación SSMART (fondos adicionales para investigadores de países en desarrollo). [▶ Link](#)
- Aplicuen al premio Leamer-Rosenthal. [▶ Link](#)
- Revisen nuestra página de recursos. [▶ Link](#)
- Interesado en incluir parte de estas prácticas en el análisis de políticas públicas? Hablen conmigo!

OK, I'm convinced. How do I implement this in my own research?

- Read the manual I wrote. [▶ Link](#)
- Subscribe to the BITSS blog & E-mail list [▶ Link](#)
- Apply for our NIH Summer Institute. [▶ Link](#)
- Apply for our SSMART Grants (extra funding for developing country researchers). [▶ Link](#)
- Apply for our Leamer-Rosenthal Prizes. [▶ Link](#)
- Free stats consulting from COS. [▶ Link](#)

Up to \$30,000 grant for a research project on:

- Develop new methodology
- New tools and approaches for meta-analysis
- Research on researchers and adoption of new norms

Extra funding source for researchers from developing countries.
